## Overview

Diran™ 410MF07 is a nylon-based thermoplastic FDM® material, mineral-filled 7% by weight. It demonstrates very good toughness and impact strength combined with resistance to hydrocarbon-based chemicals. Its smooth, lubricious surface quality offers low sliding resistance.

Typical applications include jigs, fixtures and other forms of general manufacturing tooling, and is particularly effective for applications needing a non-marring interface between the tool and the workpiece.

## Ordering Information

**3D Printer Compatibility:**F370™

**Support Material:**SUP4000B™

**Build Tray:** F370, High Temperature

**Table 1. Diran 410MF07 Thermoplastic Filament Ordering Information**

Part Number	Description
<b>Filament Canisters</b>	
333-90410	Diran 410MF07, 90 cu in, F123
333-60400	SUP4000B™, 60 cu in, F123
<b>Printer Consumables</b>	
123-00401-S	F370 Extrusion Head
123-00314-S	F370 Build Tray, High Temperature

## Physical Properties

Values are measured as printed. XY and XZ/ZX orientations were tested.

For full details refer to the [Stratasys Materials Test Procedure on www.stratasys.com](http://www.stratasys.com).

DSC and TMA curves can be found in the Appendix.

# Mechanical Properties

Samples were printed with 0.010 in. (0.254 mm) layer height.

For the full test procedure please see the Stratasys Materials Test Procedure on [www.stratasys.com](http://www.stratasys.com).

## Print Orientation

Parts created using FDM are anisotropic as a result of the printing process. Below is a reference of the different orientations used to characterize the material.

## Tensile Curves

Due to the anisotropic nature of FDM, tensile curves look different depending on orientation. Below is a guide of the two types of curves seen when printing tensile samples and what reported values mean.

**A** = Tensile at break, elongation at break (no yield point)

**B** = Tensile at yield, elongation at yield

**C** = Tensile at break, elongation at break
