PC-ISO

PC-ISO (polycarbonate-ISO), an industrial thermoplastic, which in its raw state, is biocompatible (ISO 10993 USP Class VI)\* and can be gamma or EtO sterilized. PC-ISO is commonly used in food and drug packaging and medical device manufacturing because of the material's strength and medical compatibility. In addition, PC-ISO has passed ISO 18562 testing for gas and airway parts for use in respiratory and ventilation medical devices. When combined with a Fortus® 3D Printer, PC-ISO gives you parts that can be used for conceptual modeling, functional prototyping, and production parts.

Mechanical Properties <sup>1</sup>	Test Method	Value
Tensile Strength (Type 1, 0.125", 0.2"/min)	ASTM D638	57 MPa
51.6110 Outengur (1906 1, 0.120 , 0.2 /11111)	7.01W 2000	(8,300 psi)
ensile Modulus (Type 1, 0.125", 0.2"/min)	ASTM D638	2,000 MPa
		(289,800 psi)
Tensile Elongation (Type 1, 0.125", 0.2"/min)	ASTM D638	4% (4%)
Flexural Strength (Method 1, 0.05"/min)	ASTM D790	90 MPa (13,100 psi)
		2,100 MPa
Flexural Modulus (Method 1, 0.05"/min)	ASTM D790	(310,400 psi)
IZOD Impact, notched (Method A, 23 °C)	ASTM D256	86 J/m
1200 Impact, notched (Method A, 23 C)	AO TIVI DZOD	(1.6 ft-lb/in)
IZOD Impact, un-notched (Method A, 23 °C)	ASTM D256	53 J/m
inpact, an netonica (worked 7,, 20°C)	7.01111 2200	(1 ft-lb/in)
Thermal Properties <sup>2</sup>	Test Method	<b>V</b> alue
		133 °C
Heat Deflection (HDT) @ 66 psi	ASTM D648	(271 °F)
Llost Deflection (LIDT) @ 264 poi	ACTM DC40	127 °C
Heat Deflection (HDT) @ 264 psi	ASTM D648	(260 °F)
Glass Transition (Tg)	DMA (SSYS)	161 °C
- Charleton (19)		(322 °F)
Vicat Softening	ISO 306	139 °C
		(282 °F)
elting Point		Not Applicable <sup>3</sup>
		(Not Applicable <sup>3</sup> )
Electrical Properties <sup>4</sup>	Test Method	Value Range
	ASTM D257	1.5x1014 - 8.0x1013 ohm-cm
Volume Resistivity	ASTIVI DZSI	1.001014 0.001010 01111 0111
Volume Resistivity  Dielectric Constant	ASTM D150-98	3.0 - 2.8
Dielectric Constant	ASTM D150-98	3.0 - 2.8

The information presented are typical values intended for reference and comparison purposes only. They should not be used for design specifications or quality control purposes. End-use material performance can be impacted (+/-) by, but not limited to, part design, end-use conditions, test conditions, etc. Actual values will vary with build conditions. Tested parts were built on Fortus 400mc™ @ 0.010" (0.254 mm) slice. Product specifications are subject to change without notice.

The performance characteristics of these materials may vary according to application, operating conditions, or end use. Each user is responsible for determining that the Stratasys material is safe, lawful, and technically suitable for the intended application, as well as for identifying the proper disposal (or recycling) method consistent with applicable environmental laws and regulations. Stratasys makes no warranties of any kind, express or implied, including, but not limited to, the warranties of merchantability, fitness for a particular use, or warranty against patent infringement.

\*It is the responsibility of the finished device manufacturer to determine the suitability of all the component parts and materials used in their finished products.

<sup>1</sup>Build orientation is on side long edge.

<sup>2</sup>Literature value unless otherwise noted.

<sup>3</sup>Due to amorphous nature, material does not display a melting point.

 $^4$ All Electrical Property values were generated from the average of test plaques built with default part density (solid). Test plaques were  $4.0 \times 4.0 \times 0.1$  inches (102 x 102 x 2.5 mm) and were built both in the flat and vertical orientation. The range of values is mostly the result of the difference in properties of test plaques built in the flat vs. vertical orientation.
